Average seasons.

16. Instead of the perpetual winter so much talked about, the facts are, that the average winter is about four and a-half months, and though the spring may begin two or three weeks later than in England the conditions for rapid growth—warm sunshine and rain—are so favourable that the crops of the two countries are about equally advanced by the middle of July, and as during the last few years the country has become better known, it is beginning to be understood that, though the winters are at times severe, they are healthy and enjoyable, while the summer weather is not surpassed in the most favoured parts of Europe. That the climate is superior to that of England is admitted by all who have experienced both.

"The winter now closing has been much more severe and "with much more snowfall than some of those preceding it, "and every farmer notes the fact as an augury of a capital "summer following."

The *Pioneer Press*, St. Paul, Minnesota, U.S., speaks as follows of the last two mild winters:—

"There is not a resident of Minnesota, we venture to say, who would not vote for a return of the most rigorous season ever known to this latitude rather than for a third visitation like that of last winter and this. We have had a taste of the imported winter climate of the southern zone, and it is a taste that goes a long way. To begin
