

The table shows that a close relation exists between the degree of prosperity experienced by the people generally and the amount of life insurance allowed to lapse through non-payment of premiums.

In 1877 the amount lapsed by non-payment of premiums was 10·1 per cent of the total amount of life insurance in force; in 1878 it was 10·7 per cent; in 1879 it was 9·5 per cent, and in 1880 it was 7·9 per cent. Then began a period of rapid development of life insurance, the amount effected reaching into the 100 millions and rising to the 200 millions in 1888, after which it climbed up towards the 300 million mark, which figure it reached in 1894 with eight millions over. Meanwhile the proportion of the lapsed by non-payment of premiums went down till in 1886 the percentage of lapsed was 5·4 per cent against 10·1 per cent ten years before. In 1887 it rose to 5·9 per cent; in 1888 to 7·2 per cent; in 1889 it fell to 7·1 per cent, and in 1890 it fell to 7·0 per cent. In 1891 it fell to 6·0 per cent, and in 1894 it rose to 8 per cent, indicating that the strain upon the purses of the people was being felt.

AMOUNT LAPSED OUT OF EACH \$1,000 CURRENT RISK.

YEAR.	Total in Force.	Annual Amount Effected.	LAPSED.		
			Total Lapsed.	In Cash \$1,000 at Risk.	In each \$1,000 Effected in the Year
