Farm Live Stock.—Table 4 gives the estimated numbers of each description of farm live stock (horres, cattle, sheep and swine) for the years 1912 to 1917 In this table the figures for 1917 for the provinces of Quebec, Saskatchewan, Alberta and British Columbia are as collected in June, 1917; but for the other provinces the figures are as estimated from the reports of correspondents on the basis of the census. For 1916, the figures for the three Prairie Provinces are those of the recently issued Reports on the Census of 1916, whilst for the other provinces they are estimated from the reports of correspondents. For each of the years 1912 to 1915 the figures represent for all provinces estimates based on the reports of correspondents.

Values of Farm Live Stock and of Wool.—Table 5 shows the average values per head of farm animals, as estimated from the reports of correspondents of the Census and Statistics Office for the year 1916, as compared with the years 1908, 1909, 1910, 1914 and 1915. Horses and cattle other than milch cows are divided according to age, and the unit value for swine is 100 lb. live weight. The table gives also an estimate of the value per lb. of unwashed and washed wool.

The average value of horses in 1916 was about the same as in 1915, but milch cows, other cattle, sheep and swine showed a substantial increase and returned values that were higher than in any year since these records began to be collected in 1909. Horses three years old and over averaged for Canada \$160 as against \$160 in 1915, milch cows were \$70 as compared with \$62, cattle between one year old and
