Consumption of Manufactured Products.—One of the beneficial results of placing the classification of external trade and of production upon a common basis is exhibited in Table 9, where the value of commodities made available for consumption in Canada is derived from the statistics of the two important fields. For example, the value of all manufactured commodities made available in a period approximately corresponding to 1925 was \$2,927,553,393, a figure obtained by adding to the value of manufactured products in 1925 the value of the imports of manufactured and partly manufactured goods during the fiscal year ended Mar. 31, 1926, and deducting the value of the corresponding exports for the same period. Vegetable, textile and iron products led the other groups in the value of
