

number showed a further drop to 152.0, but afterwards there was a rise from 153.0 in 1923 to 155.2 in 1924 and 160.3 in 1925. In 1926 and 1927, however, there was a drop to 156.2 and 151.6 respectively, the latter being the lowest figure since 1916. This would indicate that the comparatively small decline in the gross production of manufactured goods in 1922 was entirely due to declining values and that the increased production of 1923 resulted from larger quantities, the slight recession in 1924 being due to lessened volume. The 1925 total was swelled by increases in both values and volume, while gross production in 1926 and 1927 showed large increases in spite of a definite decline in price levels. (See Table 4.)

In Table 1 are presented statistics showing by provinces the development of Canadian manufacturing industries during the half-century from 1870 to 1927. Particularly notable is the increase in the manufactures of British Columbia from \$2,900,000 in 1880 to \$246,000,000 in 1927 and of Manitoba from \$3,400,000 in 1880 to \$142,000,000 in 1927. Saskatchewan also shows an increase from \$2,400,000 in 1905 to \$52,000,000 in 1927 and Alberta from \$5,000,000 in 1905 to \$85,000,000 in 1927. Thus the West is rapidly becoming an important contributor to Canadian manufacturing production.

1.—Historical Summary of Statistics of Manufactures, by Provinces, 1870-1927.

(All establishments irrespective of the number of employees.)

Provinces.	Estab-lish-ments.	Capital.	Em-ployees.	Salaries and Wages.	Cost of Materials.	Net Value of Products.	Gross Value of Products.
