¹See note to Table 1 on page 403.

Subsection 3.—Summary Statistics of Manufacturing Production.

Summary Statistics of Manufactures.—In Table 3 will be found an analysis of the most important statistics of local manufactures for the five years from 1922 to 1926, here brought together in order that the tendencies in Canadian manufacturing industries may be traced as clearly as possible through this latest period of their development. Similar figures for the years from 1917 to 1921 will be found at p. 384 of the 1926 Year Book, but the inflation of values in the war and immediate post-war period makes the figures for these years largely incomparable. One very important figure, however, where the trend of development proceeds clearly and uninterruptedly throughout the nine years, is concerned with the use of power, the total horse power employed increasing from 1,864,578 in 1917 to 3,134,248 in 1926 or by 88 p.c. in 9 years. In the same period the horse power used per establishment increased from
