

A word might be added with regard to the fur-seal fisheries of the Pacific, whose historic headquarters was the city of Victoria. The industry has disappeared, in part through the scarcity of the animals and in part through the workings of the Pelagic Sealing Treaty of 1911¹. The hair-seal fleets of the North Atlantic make St. John's, Newfoundland, their headquarters.

Game Fish.—The above is a purely industrial and commercial survey. Fishing for sport, however, has its economic side in a country of such famous game fish as the salmon of the Restigouche, the black bass of the Quebec and Ontario highlands and the trout of the Nipigon. A considerable public revenue is derived from the leasing of waters in sparsely settled districts to clubs and individuals for sporting purposes. Several hundred guides find employment here during the summer months.

Section 3.—The Government and the Fisheries.

Upon the organization of the Government at Confederation, the administration of the Canadian fisheries and marine was placed in the charge of a Department of the Dominion Government, which then exercised complete jurisdiction over the fisheries under the supervision of a Cabinet Minister, with a large staff of inspectors, overseers and guardians to enforce the fishery laws. In 1882, 1898, 1913 and 1920, decisions in the courts considerably altered the status of jurisdiction as between the Dominion and the provinces. To-day the Dominion controls the tidal fisheries of the Maritime Provinces and British Columbia and the fisheries of the three Prairie Provinces. The non-tidal fisheries of the Maritime Provinces and Ontario and both the tidal and non-tidal fisheries of Quebec are controlled by the respective provinces, but the right of fisheries legislation for all provinces rests with the Dominion Government. See the Fisheries Act (R.S.C. 1927, c. 73). The expenditure of the Dominion on the fisheries in the fiscal year 1928-29, including Civil Government salaries, contingencies, etc., was \$2,100,221, and the revenue \$206,154.

Conservation.—River and lake fisheries certainly, and sea fisheries probably, if left to themselves, conform to the economic law of diminishing returns. The Canadian Government, accordingly, has had for a main object the prevention of depletion, the enforcement of close seasons, the forbidding of obstructions and pollutions and the regulation of nets, gear and fishing operations generally. In addition, an extensive system of fish culture has been organized; the Dominion in 1928 operated 30 main hatcheries, 10 subsidiary hatcheries and 4 salmon-retaining ponds at a cost of \$434,472, and distributed 440,302,380 eggs, fry or older fish, mostly B.C. salmon, Atlantic salmon, pickerel and whitefish. The young fish are distributed gratis if the waters in which they are to be placed are suitable and are open to public fishing.

Direct Assistance.—Since 1927 fish collection services have been operated on several stretches of the Atlantic coast by the Fisheries Branch of the Department of Marine and Fisheries. Fishermen in the territories covered by the fish collection boats are thus enabled to sell their catches promptly and have them delivered to purchasers at central points at small cost, and are also able to spend their time in catching fish instead of in preparing their catches for the dry and cured fish markets. Further, a system has been established of broadcasting radio reports as to weather probabilities, bait and ice supplies, ice conditions along the coast and prevailing
