## 12.—Quantity and Value of Silver Produced in Canada, by Provinces, during the calendar years 1911-1929.

Note.—For the years 1887 to 1910, see Canada Year Book, 1916-1917, p. 271. Nova Scotia, Manitoba and Alberta have also shown a small production in recent years.

## Subsection 3.—Copper.

The copper-mining industry has developed at a very rapid rate. A production of 3,505,000 lb. in 1886 had doubled 6 years later. In 1913, the output had increased over twenty-one fold, amounting to 76,976,925 lb. The extraordinary demand for war requirements resulted in an average production from 1916 to 1918 of 115,048,931 lb. In the post-war depression production dropped to less than 43,000,000 lb. in 1922, but recovered rapidly and in 1928 reached the record of 202,696,046 lb., while the preliminary estimate for 1929 indicates a further increase of 22 p.c. in that year to 248,107,809 lb.

Ontario.—The Sudbury deposits were first noted in 1856, but did not attract attention until 1883-4, during the period of the construction of the Canadian Pacific
