Coal Consumption.—In 1928 Canada produced $17\cdot56$ million tons, exported $0\cdot86$ million tons, imported from the United States $17\cdot04$ million tons and from Great Britain $0\cdot67$ million tons, and from Russia, the Netherlands and British South Africa $0\cdot01$ million tons, and thus had available for consumption a total of $34\cdot41$ million tons, including $3\cdot74$ million tons of anthracite, $26\cdot11$ million tons of bituminous, $3\cdot83$ million tons of lignite and $0\cdot74$ million tons of sub-bituminous coal. The table on the annual consumption of coal shows that Canada actually used $33\cdot90$ million tons of coal during the year, or an average of $3\cdot510$ tons per capita.

The sources of the coal consumed in Canada in the calendar years 1911-1928 are shown in Table 23; detailed figures of coal made available for consumption in 1928 are given in Table 24; the difference between the totals of the two tables in the latest year is accounted for by the fact that coal received is not necessarily "cleared for consumption".
