¹ Gross value less freight and treatment charges and less value of ores charged in the case of smelters.² Electricity was not included in 1922. ³ Includes a small production from P.E.I.

A summary of the principal statistics of the mining, metallurgical, clay products and other structural materials industries operating in Canada in 1929 and 1930 is presented in Table 7. The values produced by the metallic industries given in Tables 6 and 7 are as reported by the operating companies, and are in each case the settlements received for shipments by mine operators or for products sold less cost of ores treated by smelters and refiners. The totals, therefore, indicate more nearly the actual return to the different industries than do the values for the several metals in Table 2 of this chapter, where, in the cases of copper, lead, zinc and silver,
