In Table 37 retail stores have been grouped according to the value of net sales in 1930. Of the total number of stores classified in this way, 38.38 p.c. had sales of less than \$5,000 in 1930, while 18.21 p.c. had sales between \$5,000 and \$9,999. The combined sales of these two groups formed less than 10 p.c. of the total sales in that year. On the other hand, there were only 86 stores with a turnover of \$1,000,000 or more, but these establishments handled 14.25 p.c. of the total retail merchandise trade. These very large stores are found chiefly in the general merchandise and automotive groups.
