

Detailed Statistics of Business Services.—The salient features of the business of service establishments are given in Table 45, which also shows the type of operation, *i.e.*, the extent to which these establishments operate independently or are organized in chain systems. Of the total of 42,223 establishments, there were 40,964 under independent operation, while the receipts of single independent establishments formed 74.79 p.c. of the total of all receipts for services. Except in the case of theatres, which are separately analysed in the table, chain systems were not an important factor in the service field.

45.—Retail Services in Canada, by Group and Kind of Business and Type of Operation, 1930.
