The quantity of factory cheese made in Canada during 1934 is estimated at 99,754,500 lb., a decrease of 11,391,993 lb. or  $10\cdot3$  p.c. Cheese made on farms is estimated at 1,011,300 lb., an increase of 68,000 lb. The fact that greater quantities of milk were used for butter making and for the fluid milk trade in recent years has resulted in a significant reduction in cheese manufacturing. The decrease recorded between 1933 and 1934 was greater than that shown between 1932 and 1933, but the most outstanding decline occurred in 1927 and a lesser decline in 1929. In 1868 the quantity of cheese exported from Canada was 6,141,570 lb.; in 1904 it reached its maximum exportation of 233,980,716 lb. For the calendar year ended Dec. 31, 1934, the exports were 61,167,800 lb. The apparent consumption of cheese in 1934 was 39,410,147 lb. or  $3\cdot64$  lb. per capita. It will be seen, therefore, that the domestic consumption represented only  $39\cdot1$  p.c. of the total cheese production of the Dominion.

2.—Production of Butter and Cheese in Canada, 1925-34, and by Provinces, 1934.

Miscellaneous Factory Products.—The production of condensed milk in Canada in 1934 is estimated at 8,916,000 lb. as compared with 9,899,331 lb. in the previous year. Evaporated milk increased from 53,420,684 lb. to 56,778,000 lb. The production of all concentrated whole-milk products amounted to 67,918,000 lb. in 1934 as compared with 64,608,304 lb. in 1933. The production of concentrated milk by-products amounted to 25,750,000 lb. in 1934, of which 16,576,000 lb. was skim-milk powder. In 1933 the production was 20,673,252 lb. Thus concentrated whole-milk products increased 5·1 p.c. and concentrated milk by-products increased 24·6 p.c. Ice cream made in factories in 1934 amounted to 4,444,000 gallons as compared with 4,066,209 gallons in 1933, an increase of 9·3 p.c.
