

Subsection 4.—Dairying Statistics.

The dairy industry is dealt with under the following headings: total milk production; butter and cheese; miscellaneous factory products; and, finally, the total value of the dairy production of Canada. For the year 1935 preliminary estimates have been made which will be revised when annual returns are available.

Total Milk Production.—The data presented in Table 21 represent the quantities of dairy products expressed in terms of milk. The total milk production for 1935 is estimated at 16,310,836,700 lb., a decrease of 18,448,700 lb. or 0.11 p.c. from the previous year.

Decreases in the dairy butter made on farms and in the quantities of milk otherwise used were entirely responsible for this decline, the production of all other products being greater in 1935 than in 1934.

21.—Total, Dairy Production of Canada Expressed in Pounds of Milk, 1926-35, and by Provinces, 1935.

Province.	Total Milk Production.	Made into Butter.		Made into Cheese.		Miscellaneous Factory Products. ¹	Whole Milk Otherwise Used.

¹The data in this column for 1933-35 include the ice cream made in specialized ice-cream plants and confectionery establishments. ²Figures for 1934 have been revised since the publication of the 1934-35 Year Book.

Butter and Cheese.—The butter output of creameries in 1935 was 238,854,600 lb., a gain of 4,001,639 lb., or 1.70 p.c., over the previous year, and 12,899,354 lb., or 5.71 p.c., over 1931—a record year up to that time. Dairy butter production in 1935 was 106,949,000 lb., a decrease of 2.78 p.c. Butter reached its maximum
