

Coal Resources.—A summary of the known coal resources of Canada was given on pp. 391-394 of the 1922-23 Year Book; and a summary table showing coal resources, classified by provinces, was reproduced therefrom at p. 413 of the 1934-35 Year Book.

Coal production in Canada during 1934 made a further recovery from the low level of 1932, the increase in the two years amounting to 17.6 p.c. Production was, however, still 21.4 p.c. below that of 1928, the record year. The average price per ton, which had been \$3.63 in 1928 and had dropped to \$3.16 in 1932 and \$3.02 in 1933, recovered slightly to \$3.04 in 1934. Nova Scotia was again the leading producer. The coal produced in Nova Scotia, New Brunswick, British Columbia and Yukon is all classed as bituminous, while Alberta produces bituminous, sub-bituminous and lignite, and Saskatchewan and Manitoba lignite only. The division of the 1934 production among these classes is given in Table 25. The quantity of coal mined annually in six provinces, and the Yukon Territory, and totals for Canada from 1911 to 1935 is shown in Table 21.

21.—Production of Coal in Canada, by Provinces, calendar years 1911-35.

NOTE.—For annual production from 1874 to 1910, by provinces, see 1911 Year Book, p. 419.
