## Subsection 2.—Retail Trade and Service Establishments.

As complete a review of the retail merchandising and service statistics as will appear in the Year Book from the Census of Merchandising and Service Establishments, 1931, was given at pp. 673-690 inclusive of the 1934-35 Year Book. review gave detailed analyses of such trade, annual net sales and employees engaged, by provinces, business groups and kinds of business, and by manner of operation (i.e., independents, two-store multiples, three-store multiples, voluntary and other types of chains, etc.). Since these statistics will stand until the next census is taken, it has been considered unnecessary to reprint them in this edition of the Year Book, especially as the available space has been used to better advantage in publishing new material, such as the review of retail trade 1923-30 and the annual estimates of such trade since 1930, which would not otherwise have been possible. In this edition, therefore, the only table reprinted, and this merely in part, is that showing the retail trade in Canadian cities, which appears now as Table 32. There is, however, additional new matter presented dealing with: (1) a review of retail trade, 1923-30; (2) total sales and indexes of sales by provinces and kinds of business 1930-34 (figures for 1930 being from the census and those for other years estimates based upon returns secured for the annual surveys); (3) the growth of the chain store; (4) the new monthly index of retail sales which has lately assumed permanent form and in which corrections have been made to allow for variations in number of business days and for seasonal changes; and (5) detailed statistics showing the importance of the motion picture industry, recently made available as a result of a special study of this field.

Retail Merchandise Trade of Canadian Cities.—The retail merchandise trade in Canadian cities of over 20,000 population is shown in Table 32.\* The cities are arranged in descending order according to their 1931 census populations. A notable feature of these figures is the wide variation in different cities in the relationship between population and retail sales. In general, per capita sales are high for cities which form distributing centres for large or populous areas, while such sales are lowest in residential or industrial cities adjacent to larger centres, as in the case of Verdun, Outremont, Westmount and Hull.

<sup>\*</sup> A similar table showing retail merchandise trade in cities of over 10,000 population was published at pp. 684-685 of the 1934-35 Year Book.
