

More than half of all undergraduate students, or 17,522, are in arts and pure science or what are termed "academic" courses as distinguished from "professional" courses. One or two years of arts is prerequisite to many of the professional courses—in French-language Quebec the full four years. Next to arts and science come engineering and applied science with 3,474 students; medicine, 2,985; theology, 2,253; agriculture, 1,033; law, 961; education, 841; household science, 760; commerce and accounting, 757; pharmacy, 449; dentistry, 370; public health and nursing, 302; veterinary science, 181; music, 145; forestry, 100; architecture, 93; social service, 68; etc.

As shown in Table 12, there were 4,417 bachelor degrees granted to men and 1,504 to women, 709 diplomas to men and 765 to women. Some of the latter represent completion of courses similar to those for bachelor degrees; after making due allowance for these and for duplication in cases where the same person may be receiving a second bachelor degree in a different branch of study, it may be concluded that there are, each year, about 4,000 new male and 1,400 new female university graduates with a bachelor degree or higher. The graduate degrees granted included 472 master degrees or licences to men and 91 to women, the term "licentiate" being used by the universities of Laval and Montreal in place of the term "master". Those completing the doctorate were 72 men and 9 women; while honorary doctor degrees were conferred on 83 men.

12.—Universities and Colleges of Canada: Summary of Degrees and Diplomas Granted, 1933-34.
