NET VALUES OF PRODUCTION.

NOTE.—In conformance with Resolution 23 adopted by the Conference of British Commonwealth Statisticians of 1935, the cost of fuel and electricity was deducted from the gross value of manufactured goods for 1933 and 1934. To this extent the results were rendered incomparable with those of preceding years.

¹ The gross values of agricultural production here exceed those given in Chapter VIII, Agricultural Statistics of this edition of the Year Book, by the amounts paid to patrons of dairy factories for milk and cream.

² Gross values comprise the mineral production, as shown in Chapter XII, Table 1, plus the value of ores and other raw materials of the smelting industry.

³ Statistics of custom and repair industries were not collected after 1922, and the totals for that year were repeated in 1923 and 1924. The totals for 1930 to 1934 were estimated according to the percentage change in the data for manufacturing.

⁴ The item "manufactures" includes dairy factories, sawmills, pulp-mills, fish canning and curing, electric power, and certain mineral industries, also included under other headings. This duplication, amounting in 1930 to a gross of \$757,438,326 and a net of \$453,015,547, in 1931 to a gross of \$610,025,080 and a net of \$378,885,534, in 1932 to a gross of \$425,494,363 and a net of \$260,227,869, in 1933 to a gross of \$437,416,093 and a net of \$247,208,132, and in 1934 to a gross of \$542,266,446 and a net of \$290,343,792, is eliminated from the grand totals.

⁵ The proportion of manufactures, freed from all duplication (as explained in footnote 4) to the grand total of net production was 39.2 p.c., and, under like conditions, the proportion of all secondary production to the grand total of net production was 46.5.

⁶ Figures for 1930 and 1931 were revised in accordance with the findings of the Census of 1931.

⁷ Revised since the publication of the 1936 Year Book.
