

ence on the grain crop was a factor during recent years of the wide fluctuation in the value of net production in Saskatchewan and Alberta.

The steady advance shown in British Columbia during the long cycle from 1922 to 1929 was reversed in following years. The gain in 1933 from the preceding year was nearly 7 p.c. and the advance was extended in 1934 to the extent of 20.5 p.c.

**Comparison of 1934 and 1933 by Provinces.**—Eight of the nine provinces showed gains in net production in 1934 over the preceding year. A considerable increase was shown in the output of the Maritime Provinces, due to gains in New Brunswick and Nova Scotia. The former recorded a gain of about 24.7 p.c., while Nova Scotia scored with an increase of 25.7 p.c. The decline in Prince Edward Island was limited to 1.8 p.c.

Extending the gain of the preceding year, the net production of Ontario recorded an increase of 19.5 p.c. in 1934. The increase in Quebec at 16.6 p.c. was also substantial. The trend was reversed in the Prairie Provinces, the total for the areas being up nearly 21 p.c., and the gain in British Columbia was 20.5 p.c.

The values of gross and net production are given by provinces for the years 1930 to 1934 in Table 3.

### 3.—Gross and Net Values of Production in Canada, by Provinces, 1930-34.
