¹ Provisional estimate.

² Gallons.

Total Value of Dairy Production.—The value of all dairy products in 1936 is estimated at \$208,238,128 as compared with \$192,410,423 in 1935, an increase of 8.22 p.c. The value of the dairy production of Canada in 1936 was the highest since 1930 and shows an advance of \$49,163,995 or 30.90 p.c. over the low value recorded in 1932. All products increased in value. The prices of creamery butter during the first quarter of 1936 were slightly lower than in the same period of the preceding year; in the summer months June to September, prices were considerably higher but dropped to about the level of 1935 prices for the rest of the year. The value per lb. of creamery butter, as deduced from Tables 21 and 23, represents an average of 23.0 cents in 1936 and 21.7 cents in 1935. Total butter shows a value of \$77,035,500 in 1936, an increase of \$6,625,367 as compared with 1935, while total cheese was valued at \$14,372,128 in 1936, an increase of \$3,690,796.

Apparent Consumption of Butter and Cheese, 1932-36.—Table 24 shows the apparent consumption of butter and cheese for the years 1932-36 as a deduction from the stocks at Jan. 1, production, and imports less exports. It will be seen that, according to the absolute figures, the apparent consumption of both butter and cheese showed a steady increase over the entire period except that in the case of cheese the consumption figures for 1936 declined. The per capita figures follow the absolute trends fairly closely.
