

**Quantities and Values in Recent Years.**—The wide variations in prices from year to year make total values misleading. On the other hand, the quantities of different kinds of fish are stated in many different units which make the total volume of production difficult to compare from year to year. An effort is made to overcome these difficulties in Table 5 by working out what the values would be in a later year if prices had remained the same as in the preceding year. From 1934 to 1935 there was an increase of 1·2 p.c. in the total value of the fisheries. The decrease due to lower prices was 1·3 p.c., while larger quantities caught accounted for an increase of 2·5 p.c. in total values. The improvement in 1935, following upon the larger increase of 1934, brought total values back considerably above those of 1931, although they still remained 37·5 p.c. below the \$55,050,973 recorded in 1928, before the decline began.

**5.—Value of the Fisheries Production of Canada in 1935 compared with 1934, together with the Amounts of the Change Due to Price Fluctuations and Quantity Fluctuations, respectively, by Items.**

Kind of Fish or Product.	Actual Value, 1935.	Value at Prices of 1934.	Actual Value, 1934.	Increase (+) or Decrease (-).	Due to Higher (+) or Lower (-) Prices.	Due to Larger (+) or Smaller (-) Quantities.
	\$'000	\$'000	\$'000	\$'000		
Salmon.....	12,540	13,848	12,875	- 335	- 1,308	+ 973
