The current trend of the fisheries, as shown by the statistics given in the series of tables above, is upward in nearly every feature including yields, value, capital invested, and trade. There was, however, a slight decline in employment afforded. Preliminary figures for 1936 indicate gains both in the catch from the sea fisheries and in the value of the catch to the fishermen, as landed. Statistics showing the result of the year's operations in the inland or fresh-water fisheries are not available at the time of writing. Export trade in fisheries products for the year, including products of the fresh-water fisheries as well as those from the sea, showed an increase of more than \$500,000 and, in round figures, totalled \$25,358,000.
