**Exports to Principal Countries.**—Percentages in Statement X, as in the import statement, are indicative of the predominance of the United Kingdom and the United States as customers of Canada. Similarity of tastes and standards of living, as well as favourable tariff arrangements, are considerable factors in expanding exports of Canadian industrial products to the other British dominions. The industrial countries of Europe, especially those with liberal trade policies, are an important market for Canadian foodstuffs and non-ferrous metals. In the Orient, Japan has become largely industrialized and offers a growing market for Canadian foodstuffs, forest products (especially pulp and paper), non-ferrous metals, and other minerals. Table 20 of this chapter gives actual values of Canadian exports to all important British and foreign countries for the latest five fiscal years.
