for the grain crops, brought the index up to 80.9 for 1936, the highest point since 1929. Short crops due to severe drought in Western Canada brought the index down to 77.2 in 1937. Although production was heavy in 1938, a sharp decline in prices reduced the index still further to 52.9.

Subsection 9.—Agricultural Statistics of the Census.

A summary of the more important agricultural statistics compiled from the Census of 1931 was published at pp. 295-301 of the 1934-35 edition of the Year Book. The review included statistics of tenure of farms; farm values; mortgage indebtedness; farm expenditures; farm population; farm workers; and cost of labour, farm machinery, and facilities. In the 1937 edition of the Year Book, further statistics were presented at pp. 270-273 which showed, for the Prairie Provinces, comparative figures of population, farm holdings, areas, and values, the condition of farm land, the numbers of live stock, and the acreages of the principal crops, for each of the census years 1936, 1931, 1926, 1921, and 1911.

A summary table follows showing, by provinces, the part-time farm operators classified by the other occupations that are followed by some or all of the members of families, especially on small farms of insufficient size* to furnish a livelihood. Of such part-time operators, for Canada as a whole, $20 \cdot 5$ p.c. were, in 1931, either living on income or were following occupations not classified below; $19 \cdot 8$ p.c. of the remainder were engaged in unskilled labour; $11 \cdot 6$ p.c. in personal service; $11 \cdot 5$ p.c. in fishing, hunting and trapping; while other important occupations were agriculture (for others than themselves), construction, and transportation.

[•] The census definition of a "farm" is a tract of land of one acre or more which produces agricultural products to the value of \$50 or more per annum.
