**Analysis of Current Value and Volume.**—In order to interpret more clearly and simply the trends in mineral production in Canada over the period since 1929, the table that formerly appeared here and showed the fluctuations due to changes in price or volume for the two latest years only, has been replaced in this edition by Table 3, showing the percentage of the total value contributed by each principal mineral in each year, and also showing indexes of volume for the period.

Although the year 1929 was an abnormal rather than a normal year in most economic senses, mineral production in Canada was developing and changing so rapidly up to that point, that the adoption of an earlier year as the base year would
