¹ Years ended June 30, 1899 to 1905, and July 31, 1906 to 1938. ² Wheat flour has been converted into bushels of wheat at the average rate of 44 bushels to the barrel of 196 lb. of flour. ³ In calculating the apparent home consumption, stocks of wheat on hand at July 31 have been included since 1921 and stocks of wheat flour since 1926. The consumption figures for these years are not, therefore, strictly comparable with the figures for the earlier years, for which data on carryover stocks are not available. ⁴ From records of the decennial census.
