	Officers.	Airmen.
Permanent Active Air Force.....	261	1,930
Auxiliary Active Air Force.....	99	867
Reserve of Officers.....	156	

#### Subsection 4.—The Royal Military College.

The Royal Military College of Canada, situated at Kingston, Ont., was founded in 1876 for the purpose of giving Gentlemen Cadets the moral, mental, and physical training necessary for commissioned ranks in the Army, and also for qualifying officers for command and for staff appointments. Subsequently the scope of the course was adjusted to prepare Gentlemen Cadets not only for the Army but also for the Navy and Air Force.

The Gentlemen Cadets are given a four-year course in engineering and military training. The first three years is devoted to a common course in the basic subjects for general engineering. In the fourth year, the Gentlemen Cadets are permitted to make a choice of one of the following optional courses: general, civil engineering, mechanical engineering, electrical engineering, chemical engineering, mining and metallurgic engineering.

The educational requirement for admission is junior matriculation for any recognized Canadian university or an acceptable equivalent. Candidates for admission are also required to be of good moral character and to pass a rigid medical and physical examination.

The total cost of the course for the four years is approximately \$1,500, which sum includes board and lodgings, and the cost of uniforms and educational supplies.

The number of Gentlemen Cadets who may be in attendance during any year is restricted by Order-in-Council to two hundred. The vacancies to be filled each year are allotted to the provinces in the same ratio as their respective populations bear to the population of Canada. Vacancies are filled in order of merit based on educational and physical qualifications.

Applications for admission must be submitted to the Secretary, Department of National Defence, Ottawa, not later than May 31, preceding date of entry.

A more extended reference to the activities of the College is given at pp. 1047-1048 of the 1938 Year Book.
