¹ This is a salt-water lake. ² Elevation not available. ³ High water figure—low water elevation is 1,055 ft. ⁴ High water figure—low water elevation is 1,156 ft.

and one of the world's most notable fresh-water transportation routes. In addition to the Great Lakes there are many other remarkably large lakes as is shown by Table 4: it will be noted that there are eleven lakes over 1,000 square miles in area. Apart from these lakes, named as notable for their size, there are innumerable other lakes scattered all over that major portion of the area of Canada lying within the Canadian Shield. In an area of 6,094 square miles, accurately mapped, just south and east of Lake Winnipeg, there are 3,000 lakes; in an area of 5,294 square miles, accurately mapped, southwest of Reindeer Lake in Saskatchewan, there are 7,500 lakes. A table at pp. 12-13 of the 1938 Year Book gives a more extended list of the principal lakes of Canada, by provinces, with their elevations in feet and their areas in square miles.
