**Relative Importance of the Several Branches of Production.**—Due partly to adverse weather conditions and a succession of subnormal crops in recent years, the relative importance of manufacturing has been accentuated. Agricultural production in 1937 represented only about 23 p.c. of the net output of all industries, while the manufacturing group accounted for over half of the total net production. Eliminating the duplicated items, which are also included in the several extractive industries with which they are associated, we find that the output of manufacturing industries, not elsewhere stated, was 40.2 p.c. of the net total. Mining held third place in 1937, contributing nearly 12.6 p.c. of the Dominion total. Forestry was responsible for 9.6 p.c. of the net, while construction and electric power contributed 5.9 and 4.8 p.c., respectively. Custom and repair, fisheries, and trapping followed in the order given.
