

Among the different kinds of fish, the cod of the Atlantic and the salmon of the Pacific, in the earlier years of the fishing industry, were rivals for first place; since 1895 salmon has definitely taken the lead, and the heavy packs and high prices of lobster have, in more recent years, sent cod down to third place. For the salmon fishery the yearly average value of production in the period 1929 to 1938 was \$12,515,482; for the lobster fishery, \$4,567,646; and for the cod fishery \$3,319,603. For salmon the record year in the period was 1930, with \$17,731,891; and for the lobster and cod fisheries, 1929, with \$5,696,542 and \$5,394,636, respectively. In the early days of the industry the leadership among the provinces was with Nova Scotia, but British Columbia now occupies first place, Nova Scotia second, and New Brunswick third.

<b>Totals.....</b>	<b>27,496,946</b>	<b>34,022,323</b>	<b>34,427,854</b>	<b>39,165,055</b>	<b>38,976,294</b>	<b>40,492,976</b>

In Table 4 the quantities given are those of primary products caught, but the values are those of all products, primary and secondary, marketed. The grand totals are also subdivided so as to show the values that the sea fisheries and inland fisheries, respectively, yield, as compared with the whole. More detailed tables of quantities and values of both sea and inland fish marketed, such as those published at pp. 326-328 of the 1938 Year Book, may be found at pp. 14-20 of the "Report on Fisheries Statistics, 1938" published by the Dominion Bureau of Statistics.
