

**Quantities and Values in Recent Years.**—The values upon which the figures of Table 5 are based are those of the fish products as marketed, i.e., they include values added by processing such as the canning, curing, etc., of fish products. The indexes of volume, on the other hand, are based upon the quantities of fish reported as caught and landed.

**5.—Percentages of Total Value and Indexes of Volume of Fisheries Production, by Principal Kinds of Sea and Inland Fish, 1927-38.**

NOTE.—Based on values as marketed and quantities caught.

Kind of Fish.	1927.	1928.	1929.	1930.	1931.	1932.	1933.	1934.	1935.	1936.	1937.	1938.

<sup>1</sup> Landings at British Columbia ports by United States vessels excluded for 1934 and later years.  
<sup>2</sup> Clams only in 1935 and later years. <sup>3</sup> Totals include minor items not specified. <sup>4</sup> Since ling cod was included with cod for 1926, the average of the years 1927-30 was taken as the quantity of ling cod for 1926 and this was deducted from the quantity of cod reported for 1926, the resulting amount being used as the base for the volume index.
