Fisheries Production, 1939.—Preliminary indications regarding the sea fisheries catch and landed value for 1939 would seem to show that there will be a slight drop in the catch of sea fish and shellfish and a slight falling off in the landed value. A small decrease in the marketed value is also indicated. On the Atlantic Coast there was a slight decrease in the quantity of lobsters taken and the dried fish production fell off considerably. On the Pacific Coast the catch of salmon was less and the pack of salmon showed a drop of almost 200,000 cases. The catch of halibut, however, was considerably greater. At the time of going to press (April, 1940) the statistics of the fisheries for inland Canada were not available.
