¹The figures of cost of materials vary slightly from those published in the other tables of this report. This is due to adjustments made in process supplies used by some of the mining industries considered also as manufacturers.

Section 1.—The Manufactures of the Maritime Provinces, 1937.

In Prince Edward Island the predominant agricultural and fishery resources make butter and cheese, fish curing and packing, and foods, stock and poultry the leading manufactures of the Province. Nova Scotia is renowned for its coal mines and its fisheries, but it has also extensive forests and agricultural lands and is favoured with easy access by sea to the high-grade iron ore supply of Newfoundland. These resources give rise to its leading manufactures of primary iron and steel, railway rolling-stock, fish curing and packing, pulp and paper, saw-mills, and butter and cheese. The forests of New Brunswick give a leading place to its pulp and paper and sawmilling industries, although manufactures of fish and agricultural products add to the varied output of the Province.
