

manufactured goods, and fully or chiefly manufactured goods, are divided between the continents and leading countries of the world. In trade with industrialized continents, such as Europe and Asia, Canada's imports are largely manufactured goods and her exports mainly raw materials or partly manufactured goods, while in trade with South America, Oceania, Africa, and North America (if the United States be excluded) the situation is the reverse. See also Table 15 of this chapter which shows the external trade classified by main groups according to origin and degree of manufacture.
