

Over 65 p.c. of the production in 1939 was groundwood pulp and almost 15 p.c. unbleached sulphite fibre, these two being the principal components of newsprint paper. Bleached sulphite, bleached and unbleached sulphate, soda fibre and groundwood and chemical screenings made up the remainder. A considerable market has developed for screenings in connection with the manufacture of rigid insulating boards.

The manufacture of the 4,166,301 tons of pulp produced in 1939 entailed the use of 5,386,240 rough cords of pulpwood valued at \$46,558,645 and the total value of materials used in the manufacture of pulp was \$57,157,070.
