24.-Domestic Disappearance of Dairy Products in Canada, 1939-43-concluded

¹ Includes condensed coffee, malted milk and cream powder; items that do not appear separately in this table. ² Includes four items not separately listed, namely, condensed buttermilk, powdered buttermilk, sugar of milk and casein. ³ Ice cream in terms of milk is included in the total for all products.

Subsection 5.—Horticulture

Annual statistics of commercial horticulture are confined to production and value of fruits, flowers and nursery stocks. Although no estimates of the annual production of vegetables are as yet available, an attempt is now being made to collect this information for the major crops. Details of area, production and value of all the common vegetables grown in 1940 and the area under cultivation in 1941 will be found in a series of bulletins issued by the Census Branch. The processing of fruits and vegetables is closely allied with production and the total value of Canadian produce used by the fruit and vegetable preparations and wine industries amounted to \$8,955,000 in 1940 and \$13,051,000 in 1941.

Fruit Production.—Apples are still the most important fruit crop, in point of value, grown in Canada and the value of commercial production averaged approximately \$11,000,000 for the years 1935 to 1939. Other fruits for which estimates of commercial production are available are pears, peaches, plums, cherries, apricots and grapes, together with various berries of which strawberries are the most important. Substantial revenue is also derived from native blueberries and cranberries, the former being abundant over large areas of Eastern Canada, while the
