

*Ram River.*—This development is 100 miles west of Red Deer in the foothills region. Three wells have been put down so far, but results are not conclusive. No. 3 Well, however, has struck a major gas flow with good indications of oil. On Dec. 26, 1944, this Well was reported to be at a depth of 5,181 feet and was in the Devonian limestone. The gravity of the oil is high and success at No. 3 may introduce a new and valuable field in the foothills area.
