Tuberculosis Institutions.—The statistics regarding institutions for the treatment of tuberculosis shown in Table 9, include special units for the treatment of tuberculosis in general hospitals as well as the specialized sanatoria shown separately in Table 1. The deaths in these institutions from tuberculosis in 1943 were only 37.6 p.c. of the total deaths from the disease in Canada as shown under Vital Statistics at p. 153 of this edition. However, the death rate from this disease has shown an encouraging decline since 1926.

## Subsection 2.—Statistics of Mental Hospitals

At Dec. 31, 1943, there were 46,631 patients in mental institutions in Canada and 4,440 on parole or otherwise absent, making a total of 51,071, whereas the normal bed capacity was only 42,454, showing a seriously overcrowded situation if the patient population on Jan. 1, 1943, and the admissions and separations during the year are considered. This overcrowded condition was specially marked in British
