

principle is followed in other groups. Thus, a truck driver is listed under "transportation" whether he was employed at the census date by a trucking concern or by a factory or store for the delivery of goods sold by them. Such an occupational analysis naturally gives only one side of the picture and the table below is intended to present the same statistics rearranged by industrial groups, that is, all employees who make their livelihood out of a particular industry are grouped together whatever their occupations may be. For example, the group "manufacturing" in industry tables includes all persons employed by manufacturing firms, whether engaged in the processes of production, or in the sale or transport of the product, or in clerical, or other occupations associated with the industry. The student of occupational statistics should study the two tables in relation: by so doing he will obtain a fuller interpretation of the census data than he could from either table separately.

Groups, Sex and Provinces, Census 1941
