Capital Investment.—The capital structure of the Canadian National Railways, changed by the Capital Revision Act, 1937, was reduced by \$262,770,972 (see p. 644 of the 1939 Year Book). The excess of capital liability as shown in Table 3 over the investments in road and equipment shown in Table 4 is accounted for by loans and advances from the Government to cover deficits of the Canadian National Railways and by the fact that some railway stock issues represented little actual investment in physical property. The investment account in recent years has been affected by write-offs for lines abandoned, transfers of property to other Government Departments, etc.

4.—Capital Invested in Road and Equipment of Steam Railways, 1939-44

Investment	1939	1940	1941	1942	1943	1944

¹ Details of this item are given in the annual report on "Steam Railway Statistics" issued by the Transportation and Public Utilities Branch of the Bureau of Statistics. ² Includes \$74,728,521 transferred to depreciation reserve and a credit of \$34,534,220 transferred to premium on capital and debenture stocks.

Earnings and Expenses.—The operating ratio, or ratio of expenses to revenues, of Canadian railways increased from around 70 p.c. to above 90 p.c. between 1917-20, and remained high thereafter. The United States Government took over the operation of the United States railways and increased the rates of pay of the railway employees when that country entered the War of 1914-18. The Canadian railways were also obliged to make corresponding increases and these have been the chief factor in increased operating ratio. Declining revenues without corresponding reductions in expenses during the depression period also maintained the high ratio. The period after 1938 showed a sharp decline in this ratio, due primarily to the greatly increased freight traffic occasioned by the War of 1939-45 and a subsequent acceleration in gross earnings.
