nigration to the United States of the Anglo-Saxons, repatriation of large numbers French Canadians from the United States, and the generally higher rate of crease on the part of the French as compared with the various Anglo-Saxon peoples. The factors of immigration and emigration are transitory and change rapidly but e rate of natural increase has been persistently favourable to the French.

For the British Isles races the inter-decennial increases have fallen consistently m 1911 to 1941. Between 1911 and 1921 the increase was 869,657; for the llowing decade it was 512,333; and from 1931 to 1941, 334,833.

The British Isles and French groups taken together constituted 80 p.c. of e population in 1941, as was the case in 1931; this compared with 83 p.c. in 1921, p.c. in 1911, 88 p.c. in 1901, 89 p.c. in 1881 and no less than 92 p.c. in 1871. nis pronounced decline has been due, in the main, to immigration of Continental propeans to Canada during the past 40 years.

From the beginning of the present century the proportion of the European ces (other than British and French) increased from 8.5 p.c. in 1901 to 17.8 p.c. 1941. The rate was such as to more than double the numbers of these European ocks in one decade (1901-11) and was much higher for specific origins: for instance e Belgians and Scandinavians trebled; the Jews and Italians increased more an fourfold; the Poles and Finns, respectively, were numerically five and six nes stronger in 1911 than in 1901.

The second decade of the century showed declining rates of growth; this period cluded three years of the heaviest immigration in the history of the Dominion d four years of war. The net result was that the European stocks increased om 944,783 to 1,247,103 or 32 p.c.

Several significant changes occurred in the third and fourth decades; European ocks (other than British and French) rose from 1,247,103 in 1921 to 2,043,926 1941 or by 63.9 p.c. With the resumption of moderate immigration from intinental Europe in 1921 and the relatively higher birth rate among earlier intinental European immigrants, foreign European stocks increased nearly four done-half times more rapidly than the British in 1921-31.

.-Racial Origins of the Population, Census Years 1871-1941, with Percentage Distribution for 1941
