¹ Buildings used for habitation only.

² Does not include dwellings with tenure not stated.

For further details concerning tenure and kind of dwellings, composition and size of family and households, see pp. 121-125 of the 1946 edition of the Year Book.

Section 16.—Quinquennial Census of the Prairie Provinces

The Census and Statistics Act of 1905 and the Statistics Act of 1918 provide for a census of population and agriculture for the Provinces of Manitoba, Saskatchewan and Alberta, to be taken in 1906 and every tenth year thereafter, in addition to the Dominion Decennial Census.

The latest Prairie Provinces Census was taken on June 3, 1946, and detailed results of this Census will be published by the Dominion Bureau of Statistics.

As in the past, this Census covers both population and agriculture. In addition, a housing census was taken in cities and towns of 5,000 population or over. The population census also ascertains age, sex, marital condition, birthplace, place of residence in 1941, nationality, mother tongue, and degree of education. In addition, every person 14 years of age or over reported his occupation, the industry in which he was employed and his occupational status, as employer, wage-earner, own account, etc. Wage-earners reported their earnings for the twelve months immediately preceding the census date. Questions were asked to determine the amount of unemployment at the date of the Census given above.

The Census of Agriculture ascertained the farm population and the number of farm workers; the area, condition and value of farm lands; the area and production of crops; the numbers of live stock and the production of animal products; farm facilities; mortgage indebtedness; farm expenditures and gross revenues of farms.
