

Infant Mortality by Causes of Death.—Of the infant deaths that occur in Canada, about 90 p.c. are due to the nine causes and groups of causes specified in Table 28. One cause, premature birth, accounts for over 20 p.c. The rates from nearly all causes are higher for male than for female children; the only exception shown in the table is for communicable diseases in 1944.

28.—Infant Mortality and Rates per 100,000 Live Births, by Principal Causes, 1944-46

NOTE.—Figures are by place of residence.

	1946	8,824	6,610	15,434	5,192	4,111	4,667	100.0

¹ Includes measles, scarlet fever, whooping cough, diphtheria, influenza, erysipelas, acute poliomyelitis and polioencephalitis, cerebrospinal meningitis, tuberculosis and syphilis.

Subsection 3.—Maternal Mortality

As in the case of infant mortality, the number of mothers who die in pregnancy and childbirth has been greatly reduced. Maternal mortality in Canada and the provinces is shown in Table 29. Although the number of births has been much greater in recent years, the number of maternal deaths has been well below a thousand
