1947	117,704	9.4	66,438	10.4	51,266	8.3

Deaths in Urban Centres.—In Table 22 deaths are classified by place of residence. The death rates in urban centres vary only slightly from the death rates of their respective provinces. However, due to the influx of young people from the rural areas, the age distribution of the population in urban centres is often more favourable to a low death rate than that of the province as a whole.
