**Apiculture.**—Honey production in Eastern Canada returned to more normal levels in 1947 after two years of unusually small crops. Farm prices reached an all-time high with the average for the crop amounting to 25 cents per lb. The pre-war export market for Canadian honey was the United Kingdom but since the War very little has moved in that direction. During the period of the sugar shortage, exports of honey were forbidden and the domestic market readily absorbed the crop. During the 1947-48 season when a surplus developed and shipments might have again been resumed, the United Kingdom government put exchange controls into effect which amounted to a virtual embargo against Canadian honey. In addition, prices being offered by importers were much lower than Canadian growers would accept, so that even with all restrictions removed shipments would not have been made.
