The amount of benefit paid, as presented in Table 15, is secured by multiplying each daily rate of benefit by the number of days paid at that rate on the cards representing benefit years upon which benefit was drawn in 1947.

In Table 16, the persons with current benefit years in 1947 are classified according to the number of benefit days paid. Table 17 classifies those who drew benefit by the daily rate at which they were paid. The daily rate of benefit is determined by the amount of the daily average contribution paid on behalf of the claimant during the past two years and by whether or not he has a dependant within the meaning of the Act.

The persons who established benefit years in 1947, those whose benefit years terminated in 1947, with those whose benefit years terminated by exhaustion of rights, shown separately, are classified by age groups in Table 18. In Table 19 the persons who established benefit years in 1947 and the benefit days paid on those benefit years are presented by industrial group and age.

Table 20 classifies those who established benefit years in 1947 and the days paid on those benefit years by occupation groups. The classification of occupations used in this Table is that designed for the Census of the Prairie Provinces, 1946.

A more detailed analysis of these data, by sex and province, is available in the publication "Annual Report on Current Benefit Years Under the Unemployment Insurance Act" issued by the Dominion Bureau of Statistics.

14.—Persons Insured under the Unemployment Insurance Act, classified by Industrial Groups and Sex, 1946 and 1947

Note.—These figures include only those who exchanged an unemployment insurance book or were issued a book for the first time in April. They therefore represent an estimate of the number employed in insurable employment as at Apr. 1.
