

Organized Services.—Organized services analysed in Table 6 are hospital departments or services in charge of qualified specialists. Many of the smaller public general hospitals have available certain facilities for specialized services but, since these are not organized, they are not included in the figures in the table.

Organized Out-Patient Departments.—Out-patient departments are operated by hospitals for the treatment of patients who do not occupy in-patient beds. The extension of out-patient services to patients of modest means has far-reaching and beneficial effects. It may eliminate unnecessary admissions to in-patient wards of hospitals or may serve to secure necessary hospitalization.
