Births in Urban Centres.—Table 2 shows the number of births, regardless of where they occurred, to mothers residing in urban centres of over 10,000 population. (Pp. 189-191.)

Illegitimacy.—In 1952 less than 4 p.c. of the live births in Canada were illegitimate. This percentage is low compared with that of many countries of the world. In the 5-year period 1926-30 it was 3 p.c., whereas the average of the ten years 1943-52 was just over 4 p.c. The apparent increase was partly the result of more complete registration of illegitimate births brought about by the co-operation of provincial registration officials and social welfare agencies.

## 6.—Illegitimate Live Births and Percentages of Total Live Births, by Province, 1921-52

Year	N'f'ld.	P.E.I.	N.S.	N.B.	Que.	Ont.	Man.	Sask.	Alta.	B.C.	Canada

(Exclusive of the Territories)

<sup>1</sup> Figures for Newfoundland are included for 1949-52 only.

Stillbirths.—The rate of stillbirths has been falling since 1926, though not equally in all provinces. The rate of stillbirths to unmarried mothers has always been considerably higher than that for married mothers, and consequently higher than the over-all rate; but this difference has been disappearing in recent years.
