<sup>1</sup> Cows and heifers, two years or over, kept for milk purposes.

The Federal Department of Agriculture inspects all live stock in plants designated as inspected establishments under the Meat and Canned Foods Act. A statistical record is kept of these inspections and the figures appear in Table 18. Local wholesale butchering and such slaughterings as are carried out by retail butchers and by farmers for their own use are not included. Actually, the slaughtering and meat-packing industry is concentrated into a comparatively small number of large establishments to facilitate greater efficiency and utilization of products. Thus, the figures of Table 18 are fairly inclusive. The slaughtering and meat-packing industry is dealt with in its proper relation to all other manufacturing enterprises in Chapter XV of this volume. On a gross value basis it normally ranks among the three largest manufacturing industries in Canada but it owes its importance to the value of raw products obtained from the farmer and the rancher rather than to the value added by the manufacturing process.
