Excluding Newfoundland, three provinces accounted for 83 p.c. of the total marketed value of fisheries products in 1953; British Columbia's share was 44 p.c., a substantial decrease from the previous year, followed by Nova Scotia with 27 p.c. and New Brunswick with 12 p.c. Also excluding Newfoundland, the same three provinces accounted for nearly 84 p.c. of the marketed value of fisheries products in 1954; British Columbia's share was 43 p.c., New Brunswick's 14 p.c., and Nova Scotia's 27 p.c.

Table 4 shows the quantities of the main species of the commercial fisheries landed (primary products only) and values marketed (primary and secondary products). Minor items and secondary products not specifically derived from one particular kind of fish are grouped in the item "Other".

4.—Quantities Landed and Values of All Marketed Products of the Chief Commercial Fisheries 1949-531

(Exclusive of Newfoundland)

Note.—The quantity landed excludes the weight of livers but the value of liver products is included in the value for the species concerned.
